Respected Sir,

We Hope you are fine, happy& healthy

This is appeal kindly request your community to open their heart for worthy Couse.

As per our survey and government record in this area, every month about 425-450 deliveries occurs but only 225-250 deliveries occurs in various hospital while other deliveries are conducted at home by non medico person like untrained dian.

Most of pregnant women never come to hospital for routine check up. Only 10 % pregnant women come to hospital for routine check up, sonography, laboratory investigation and for medicine while remaining pregnant women come with some complication like leaking of the amniotic fluid, bleeding, premature labor pain or feotal distress at last moment of the delivery. Most of women about 90-95% in these areas are severally anemic and under nourished.

Because of the poverty and illiteracy most of the pregnant women avoid to come hospital for routine check

up. Because of this maternal and newborn mortality is very high here. That's why we are thinking about a project which helps to solve these problems. In this project we will provide free consultation, free sonography, free laboratory investigation, free medicine like haematinic capsule, folic acid, Calcium, Protein powder and other drugs for pregnant women prescribed by gynecologist till 45 days after delivery. We are also thinking to provide a nutrition kit to mother and new born babies.

By this project, we will be able to bring at least 250-300 pregnant women to hospital for routine check up and delivery every month. And in such way, we can reduce maternal & child mortality rate.

Our hospital having full time gynecologist and pediatrician. So we are able to reduce maternal mortality and infant mortality rate up to 90 % in our hospital.

As per discussion with Gynecologist, Paediatrician, Pathologist and chemist if we examine and treat minimum 250 pregnant women every month then we need Rs.600/pregnant women means Rs.1,50,000/month means Rs.18,00,000/year.(\$ 30,000/ year)

With your financial help and support for Eye department we are able to run smoothly Eye Department. If you can provide financial help for mother and child health project then it's a great blessing for pregnant women and new born child of this rural backward and tribal areas

We ensure that your donation will surely move in right direction.

Thanks and regards,
